

# Do you know what your doctor's prescribing?

## Ask questions about your prescriptions

They may be your doctor, but this is your health and livelihood. With opioids, you want to have all the answers before taking that first pill.

When your doctor prescribes painkillers, ask  
these questions:

- ➔ 1. Am I at risk for addiction?
- ➔ 2. Will something else work?
- ➔ 3. How long will I be taking them?
